# ASSIGNMENT:-15

PROBLEM STATEMENT:-

Create a Serverless computing service.

Steps:-

1. Go to **Lambda** then click on **Create a function.**

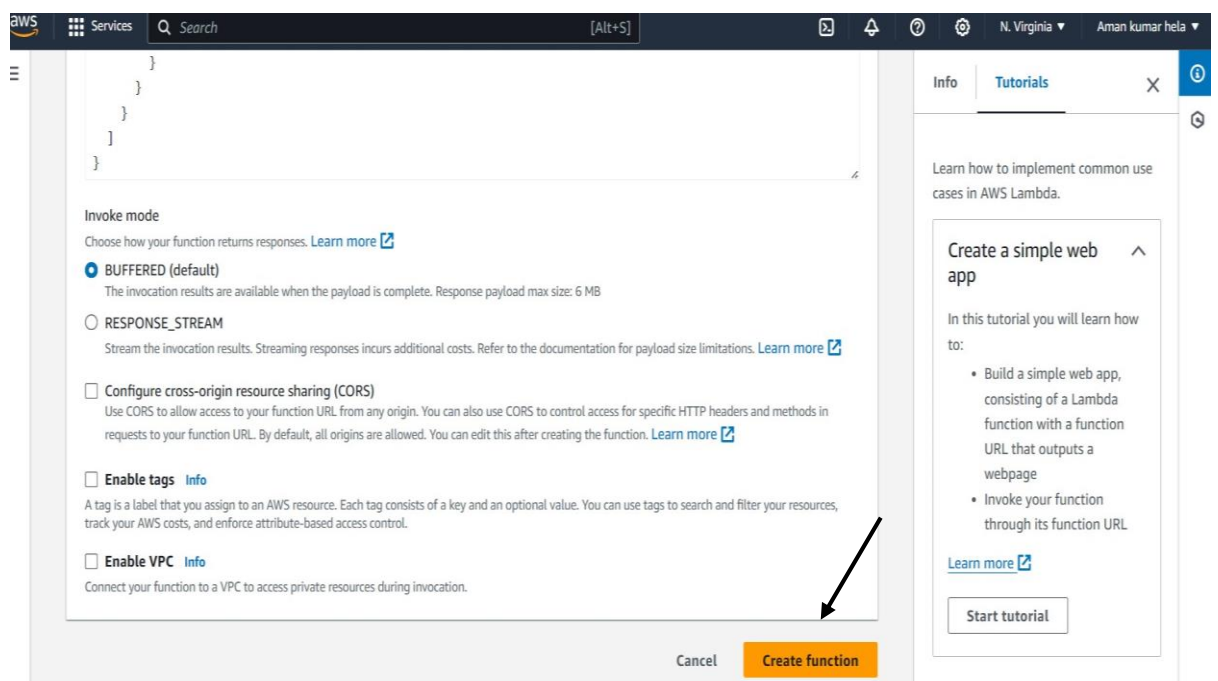

2. Give **function name** and then in **Runtime** select any language let **Python 3.12**

3. Now in **Advanced settings** click on **Enable function URL** then in
   *NONE* option in **Auth Type**.

4. Click on **Create function**.

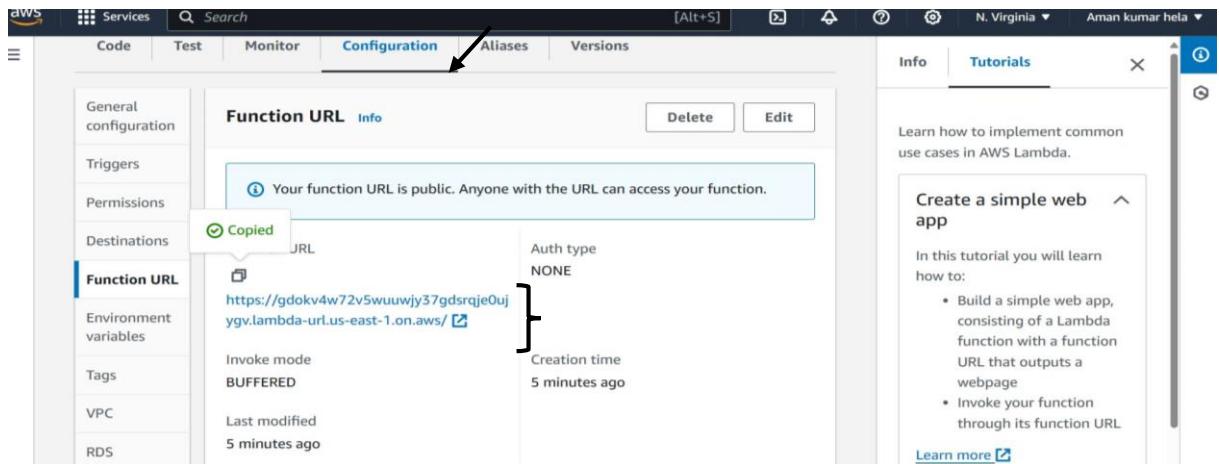

5. Now in **Code** section change the code then **Deploy.**

6. Now in **Test** click on **Create new event** and give name *test* and then click on **Test.**

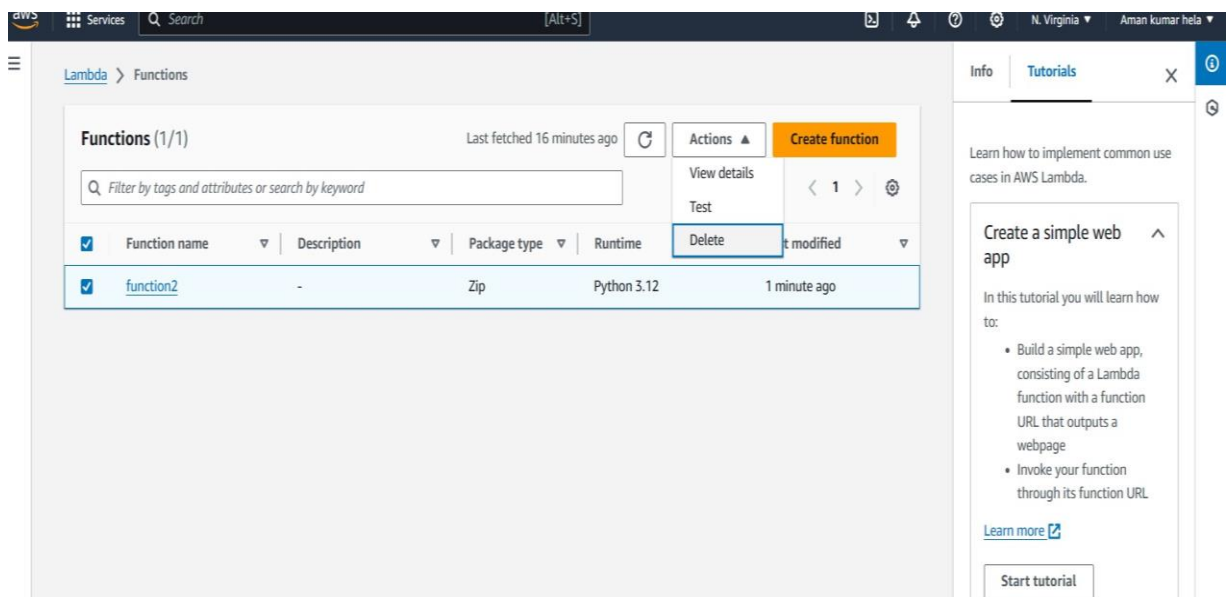

7. Now in **Configuration** copy function url.

8. At last paste that in new tab and you can see changed code.

9. After all go back to **function** , select it and then in **Actions** click on **Delete.**

10.   Now confirm your **delete** function and **close.**
